● 产品选型：详见产品综合样本。

The type that selects products: See the products for details and synthesize samples.

安装使用及注意事项 Install using and points for attention:

● 光电轴角编码器属于高精度仪器，安装时严禁敲击和摔打碰撞，安装或使用不当会影响编码器的性能和使用寿命。

The angle encoder of axle of photoelectricity belongs to the instrument of high accuracy, forbid beating and beating colliding at the time of installation, Installation or unwise use of the performance and life-span that will influence the encoder.

● 安装时注意其容许的轴负载，不得超过极限负载。

Pay attention to its load of axle allowing at the time of installation, can't exceed the limit load.

● 注意不要超过极限转速，如超过极限转速时，电信号可能会丢失。编码器正常工作时的极限转速 $N_{max} = \frac{60 \times 100 \times 10^3}{L}$ r/min (L为光栅刻线数)

Pay attention not exceeding the rotational speed of limit, may be lost such as the telecommunications number while exceeding the rotational speed of limit. The rotational speed of limit at the time of the normal work of the encoder, $N_{max} = \frac{60 \times 100 \times 10^3}{L}$ r/min (L: Carves the line to count for the grating)

● 接线务必正确，错误接线会导致内部电路损坏。

It must be correct to wire, wrong wiring will lead to the fact that the inside circuit will be damaged.

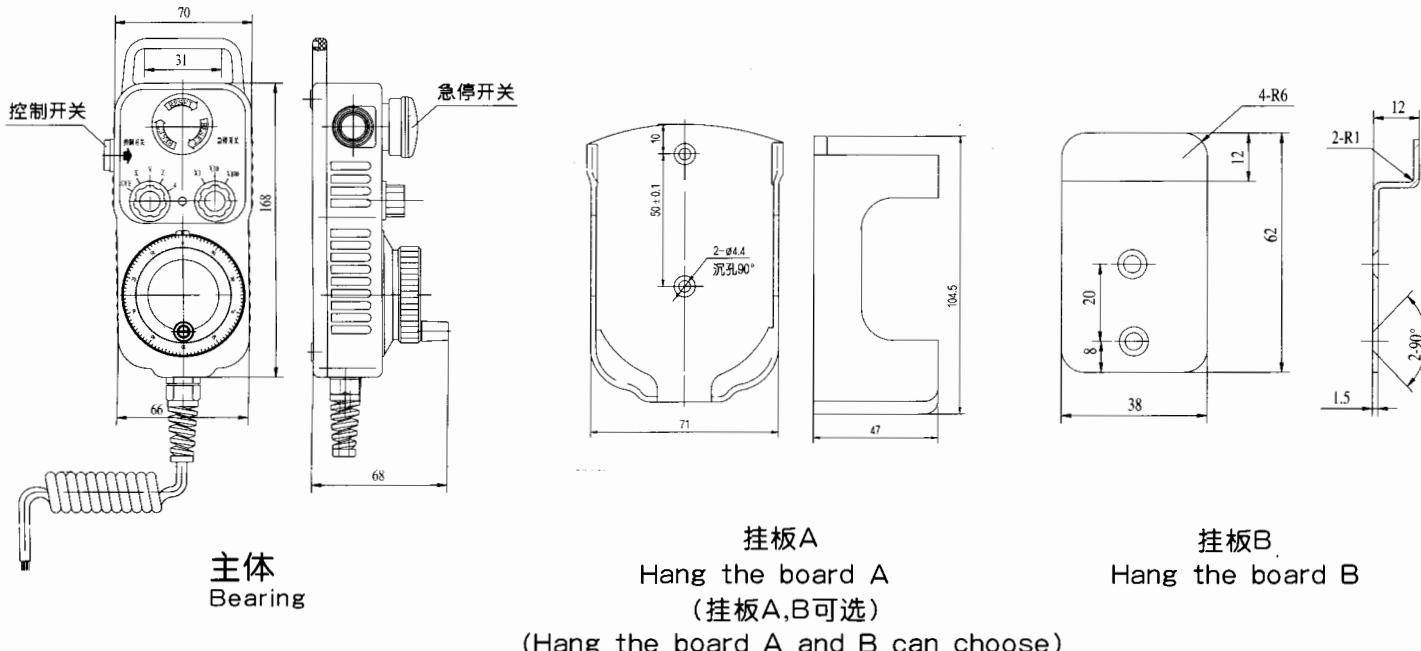

● 请不要将编码器的输出线与动力线等绕在一起或同一管道传输，也不宜在配线盘附近使用，以防干扰。

Please have been don't have been at encoder and power line and so on. Wind output line together or the same pipeline transmitting. Should not either be mixing a record of nearby of the line to use, so as not to interaction.

注意：安装或使用不当会影响编码器的性能和使用寿命。

Be careful: installation or unwise use of the performance and service life of influencing the encoder.
